Thank you for your input! actually that's a very common problem pilot wont stay lit. I then tried to light the pilot light again and was able to get a spark then after a few more igniter pushed I got a little blue flame. If thermocouple circuit (thermocouple, hi limit switch) putting 20-35 mv will not hold in the pilot. Warning: This is an unsupported browser. There are numerous factors to consider when selecting the best water heater. I have read the service manual 300 times and I cannot figure out how to get this bad boy up and running again. If not take a short piece of wire put it in the spade clips see if the pilot holds if it does switch is bad this is how to test it. Natural gas and lp have two different size orifices. The status light does "two blinks, 3 second pause". Such factors include your personal preference, local utilities, capacity, warranty and value. Nat .022 lp .010 can vary in size few thousands. I held the pilot button down for what felt like a century and once I let it go the flame would go out, over and over again. Put everything back together, noticed that I was able to "push in" the red button on the Resettable Thermal Switch (red-290 degrees). Hopefully it is one of those because I am at a loss and I haven't seen anyone that's had the same issue as me. This is a sponsored advertisement. It was installed in 2016 and is for residential use in my furnace closet. I purchased a whole new pilot assembly and replaced the old one and I am still having the same issue. It would not stay lit and from what I could tell, the flame was very weak. Thermocouples only put out between 20-35 mv. I am purchasing a new Resettable Thermal Switch, but other than that I have NO idea how to fix it. Find out everything you need to know about the best water heaters for your home here. I ordered a new gas valve and red resettable thermal switch. Open up the WH, took out the pilot assembly, cleaned the thermopile, cleaned off the grate that is on the very bottom under the burner because that had some crud on it. but did the pilot assembly come with a Thermopile? MORE FROM CONSUMERSEARCH.COM If that isn't sending the signal to the gas valve then the gas valve won't stay open on its own. fiter 30 been very descriptive troubleshooting tips. Yes, I made sure to buy the exact part # listed in the manual. Yes, the pilot assembly came with the igniter, thermopile, and another part all connected together. I turn it to "OFF", waited a good 20 minutes or so then turned it to "Pilot" held that down for a minute or so then hit "Ignite" thirty times at least. Then nothing, no spark, no flame, nothing. But it is a very weak blue flame and will not stay lit after I take my finger off the pilot button. I'd save my money on a complete valve for now till I knew USDA.gov Before you go shopping for a new water heater, you must do your homework. Pushed it in, no problem. If you have a multi meter measure resistance cross switch should be close to 0 ohms. Go to light the pilot, get a little blue flame, let go of the pilot button, and it goes out. We recommend Chrome, Firefox, Safari, or Microsoft Edge.All you need for everything you own." Hello! New to forum, also may lose my mind if I can't fix my WH! My pilot light went out randomly on Father's Day. The hi temp switch pull electric spade clips off they should have resistance to pulling them. Are you sure the new pilot assembly was the same exact model number as the old assembly. Disconnect thermocouple from gas valve inspect thermocouple end make sure that its clean and in the gas valve with a mirror reinstall tighten till snug 1/4 turn more. The thermocouple was replaced and now will spark & light. I'm not a terribly good water heater diagnostics guy.. Any suggestions?! Thanks!! I'm not a terribly good water heater diagnostics guy.. No reason at all that I know of. Moreover, it's essential to learn the various features of top water heaters in the market to make an informed decision. Two blinks bad / weak thermocouple. Two blinks bad / weak thermocouple.
